### CHANGES IN THE INSTRUCTIONS

The game can be played with a joystick or keyboard (cursor keys) and confirmation is made with the space bar or fire button.

During the Oorxx flight, use the following commands:-

To accelerate -  and space bar or fire button simultaneously.

To slow down -  and space bar or fire button simultaneously.

To speed up the hyperspace or flight sequences, press the space bar and confirm by pressing ESC.

## IBM PC & COMPATIBLES

### LOADING & START-UP

Make sure the computer is properly connected. Load DOS. Install the mouse. Insert Disk 1 in the drive. Type ERE and press RETURN.

The program will load and start automatically.

### CHANGES IN THE INSTRUCTIONS

You can play using the mouse, keyboard or joystick. Confirmation is made by clicking on the left hand button of the mouse, the space bar or Return, and the fire button.

When the Oorxx is flying over the planet's surface, use the following commands:-

	MOUSE	KEYBOARD	JOYSTICK
To accelerate	Press button on right-hand side	CTRL	Move joystick forward & press fire button
To slow down	Press button on left-hand side	ALT	Move joystick back & press fire button

If you confirm by pressing ESC for HYPERSPACE, DESTROY and FLIGHT, you will avoid the special effects. If you press any of the function keys (F1-F10) whilst flying over the planet, the special effects will be much shorter. You can take a photo if you press any of the function keys whilst the Oorxx is flying through the canyons.

The minus key (-) is the panic key. If you press this, an A will appear on the screen. To return to the game, press - again.
